

# Parallel Lines

## 11<sup>th</sup> Maths - Chapter 10

This is Problem-3 from Exercise 10.4

1. Find the equations of the lines, which cut-off intercepts on the axes whose sum and product are 1 and -6, respectively.

### 1 Solution

Let the x intercept be a and the y intercept be b ,Then

$$(a + b) = 1 \quad (1)$$

$$(ab) = -6 \quad (2)$$

upon simplifying (1) and (2)

$$\begin{pmatrix} a \\ b \end{pmatrix} = \begin{pmatrix} 3 \\ -2 \end{pmatrix}, \begin{pmatrix} -2 \\ 3 \end{pmatrix} \quad (3)$$

Thus,the possible equations of the line as

$$\mathbf{n} = \begin{pmatrix} 2 \\ -3 \end{pmatrix} \quad (4)$$

$$(2, -3) \left( \mathbf{x} - \begin{pmatrix} 3 \\ -2 \end{pmatrix} \right) = 6 \quad (5)$$

$$(2, -3) \mathbf{x} = 6 \quad (6)$$

or

$$\mathbf{n} = \begin{pmatrix} -3 \\ 2 \end{pmatrix} \quad (7)$$

$$(-3, 2) \left( \mathbf{x} - \begin{pmatrix} -2 \\ 3 \end{pmatrix} \right) = 6 \quad (8)$$

$$(-3, 2) \mathbf{x} = 6 \quad (9)$$
