## Properties of Collinear

## 1 $10^{th}$ Maths - Chapter 7

## This is Problem-2 from Exercise 7.3.2

- 1. In each of the following find the value of 'k', for which the points are collinear.
- 2. (7, -2), (5, 1), (3, k)
- 3. (8, 1), (k, -4), (2, -5).
- 4. Solution for problem: 1

$$\mathbf{A} = \begin{pmatrix} 7 \\ -2 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} 5 \\ 1 \end{pmatrix}, \mathbf{C} = \begin{pmatrix} 3 \\ k \end{pmatrix} \tag{1}$$

$$\mathbf{D} = (\mathbf{A} - \mathbf{B}) = \begin{pmatrix} 7 \\ -2 \end{pmatrix} - \begin{pmatrix} 5 \\ 1 \end{pmatrix} = \begin{pmatrix} 2 \\ -3 \end{pmatrix} \tag{2}$$

$$\mathbf{E} = (\mathbf{A} - \mathbf{C}) = \left( \begin{pmatrix} 7 \\ -2 \end{pmatrix} - \begin{pmatrix} 3 \\ k \end{pmatrix} \right) = \begin{pmatrix} 4 \\ -2 - k \end{pmatrix}$$
 (3)

If points on a line are collinear, rank of matrix is " 1" then the vectors are in linearly dependent. For  $2\times 2$  matrix Rank = 1 means Determinant is 0. Through pivoting, we obtain

$$\mathbf{F} = \begin{pmatrix} \mathbf{D} \\ \mathbf{E} \end{pmatrix} \tag{4}$$

$$\begin{pmatrix} 2 & -3 \\ 4 & -2 - k \end{pmatrix} \tag{5}$$

$$\begin{pmatrix} 2 & -3 \\ 4 & -2 - k \end{pmatrix} \xleftarrow{R_2 = R_2 - 2R_1} \begin{pmatrix} 2 & -3 \\ 0 & -k + 4 \end{pmatrix} \tag{6}$$

If the rank of the matrix has to be 1, then -k+4=0.

$$-k+4=0 \\ \implies k=4$$
 (7)

## 5. Solution for problem:2

$$\mathbf{A} = \begin{pmatrix} 8 \\ 1 \end{pmatrix}, \mathbf{B} = \begin{pmatrix} k \\ -4 \end{pmatrix}, \mathbf{C} = \begin{pmatrix} 2 \\ -5 \end{pmatrix}$$
 (8)

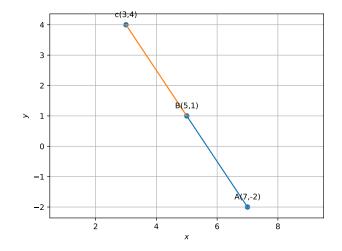

Figure 1

$$\mathbf{D} = (\mathbf{A} - \mathbf{C}) = \begin{pmatrix} 8 \\ 1 \end{pmatrix} - \begin{pmatrix} 2 \\ -5 \end{pmatrix} = \begin{pmatrix} 6 \\ 6 \end{pmatrix} \tag{9}$$

$$\mathbf{E} = (\mathbf{A} - \mathbf{B}) = \begin{pmatrix} 8 \\ 1 \end{pmatrix} - \begin{pmatrix} k \\ -4 \end{pmatrix} = \begin{pmatrix} 8 - k \\ 5 \end{pmatrix}$$
 (10)

If points on a line are collinear, rank of matrix is " 1" then the vectors are in linearly dependent. For  $2\times 2$  matrix Rank = 1 means Determinant is 0. Through pivoting, we obtain

$$\mathbf{F} = \begin{pmatrix} \mathbf{D} \\ \mathbf{E} \end{pmatrix} \tag{11}$$

$$\begin{pmatrix} 6 & 6 \\ 8 - k & 5 \end{pmatrix} \tag{12}$$

$$\begin{pmatrix} 6 & 6 \\ 8 - k & 5 \end{pmatrix} \stackrel{\frac{R_2}{8 - k}}{\longleftrightarrow} \begin{pmatrix} 6 & 6 \\ 1 & \frac{5}{8 - k} \end{pmatrix} \tag{13}$$

$$\stackrel{R_2=6R_2-R_1}{\longleftrightarrow} \begin{pmatrix} 6 & 6\\ 0 & \frac{30}{8-k} - 6 \end{pmatrix} \tag{14}$$

If the rank of the matrix has to be 1 , then  $\frac{30}{8-k}-6=0$ 

$$8 - k = 5 
\Longrightarrow k = 3$$
(15)
